

PBM 06

Parijatha PBM-06 is a semi-automatic block machine which can produce a range of High quality Concrete products. Compact, yet effective the PBM-06 achieves the strength and finish which matches the industry standards, making it a very popular machine for smaller companies or on-site production requirements.

Products that can be manufactured on this machine include fly ash bricks, paving Blocks, hollow & solid blocks, kerb stones, Grass Pavers etc.

PRODUCTS

Fly ash Brick

Paver Blocks

Hollow Blocks

Grass Pavers

The PBM 06 Block Machine consists of a sturdy frame which houses the pressing and the mould cylinder system including the specially designed vibrating system.

Motorised material feed box ensures that the right quantity of material is poured in to the Mould Cavity so that the operator can easily level up the same and proceed with the pressing and de-moulding cycle.

Simple and easy to use electrical controls designed for trouble free working and easy maintenance. The fully encased vibration system can be synchronized with the PLC control to achieve better product quality

TECHNICAL SPECIFICATIONS

Max working area
600 x 450 mm

Production Capacity
900-1200 cycles/8 hrs shift

Power Required
10 HP

KEY FEATURES

- Compact yet efficient machine, easy to operate and maintain
- Top-notch vibration system ensuring superior strength and finish
- Easily portable and installed at sites
- Designed for quick and easy mould change
- Low mould cost
